

# SMART Systems

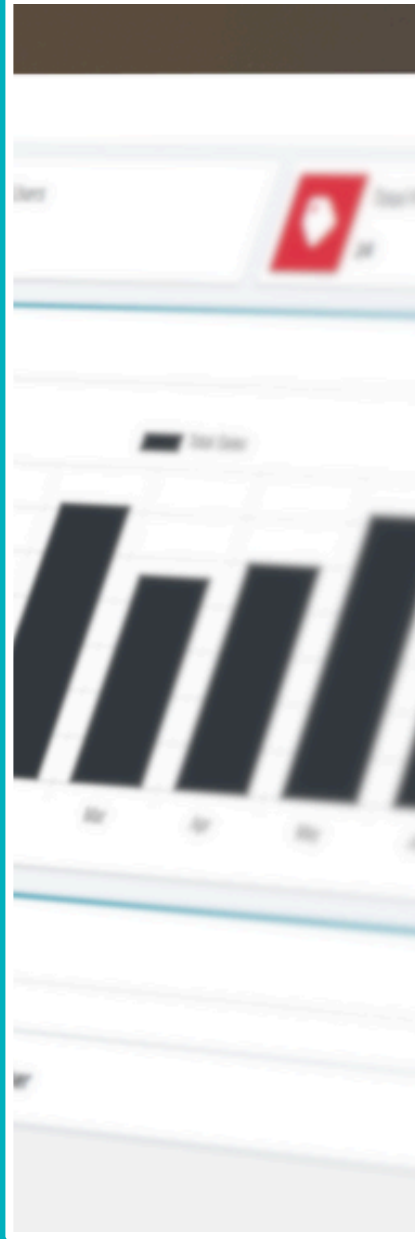

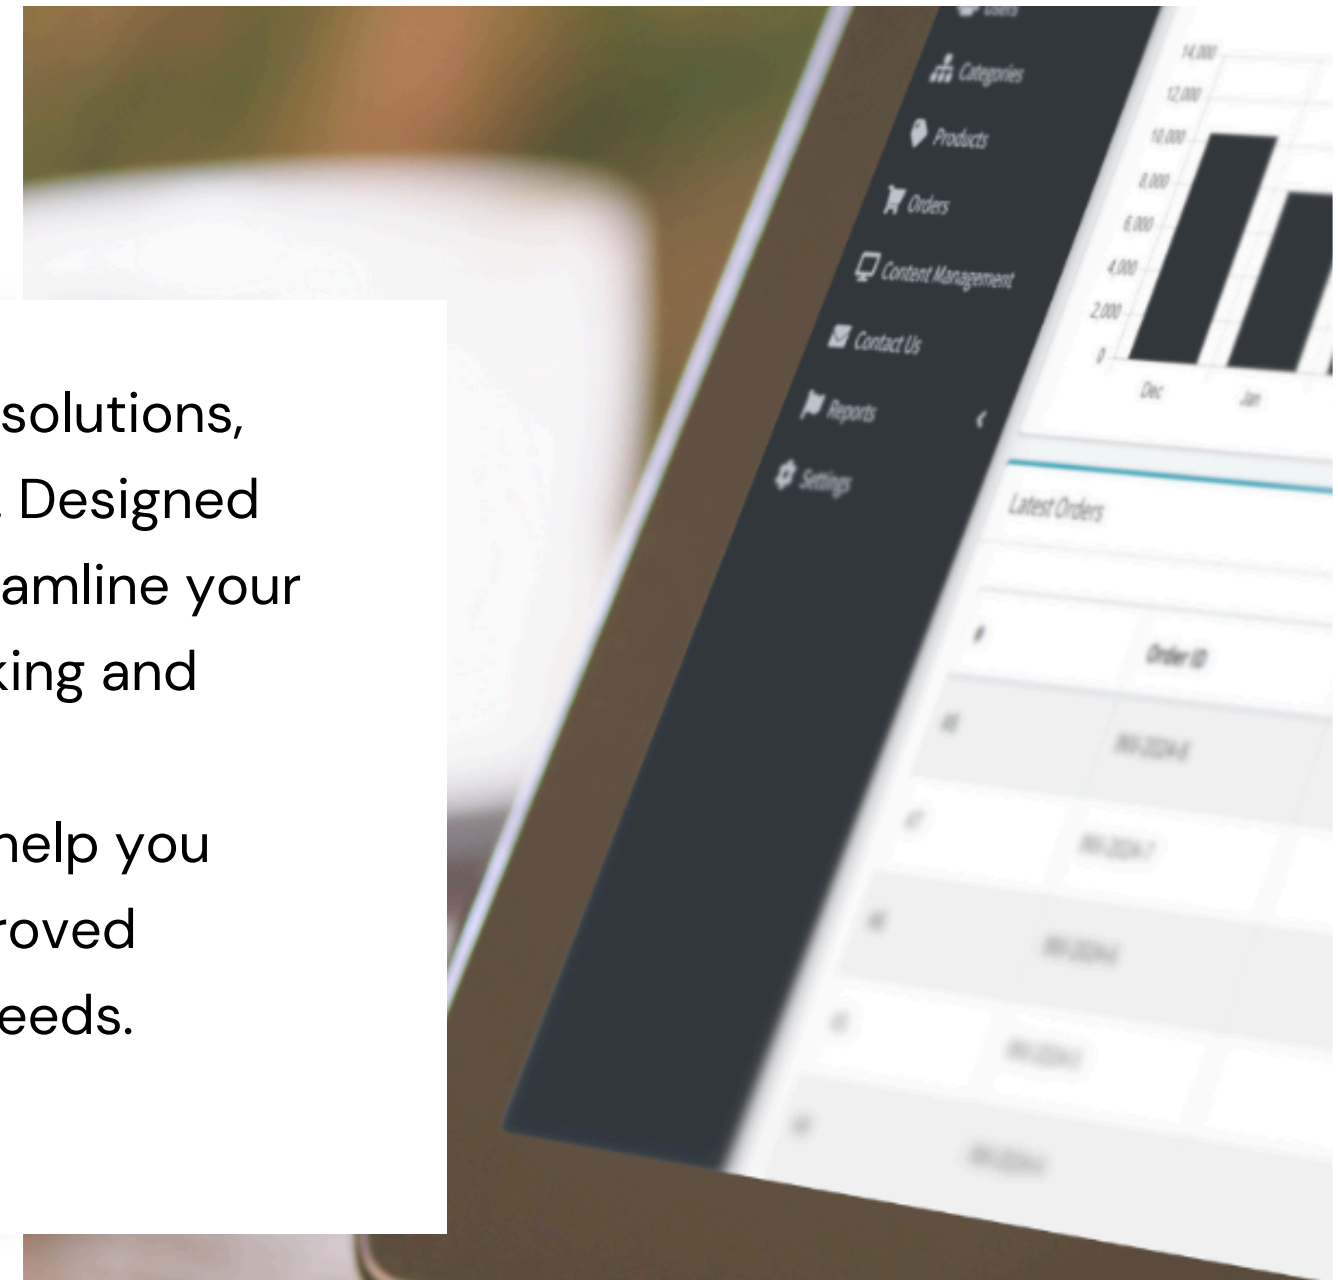

Custom Order management systems  
that increase efficiency

# Introduction To Smart Systems

**Overview-** SMART Systems are our bespoke order management solutions, crafted to boost your business's efficiency, accuracy, and growth. Designed for seamless integration with your existing tools, our systems streamline your entire order process, from entry to fulfillment, with real-time tracking and automated notifications.

By leveraging advanced reporting and analytics, SMART Systems help you achieve greater order accuracy, faster processing times, and improved customer satisfaction, all tailored to meet your unique business needs.

# Key Features and Benefits

## Key Features

- ✓ Integration with current systems
- ✓ Inventory management
- ✓ Advanced Sales reporting
- ✓ Automated emails
- ✓ Front End web design

## Benefits of these

- ✓ Easy to set up and use
- ✓ Manage stock levels with real-time orders
- ✓ Increase revenue streams into the business
- ✓ Detail where your cash-cows are for the business
- ✓ Reduce time wasted
- ✓ Keeps in line with your business branding

# How Smart Systems Work

- User purchases a product through your website, capturing all essential details.
- The system will then verify all the details, while checking your inventory levels to ensure the order can be fulfilled.
- The order is then sent to the fulfillment team, who will package and send the product off for shipping. The system prepares all the correct shipping labels and packing slips.
- The system is fully automated with any existing accountancy systems, so orders can be tracked and logged, while keeping all the data consistent.
- Meanwhile, all automated notifications are sent out to all the correct teams, with updates on stages of fulfillment for the customer.
- The SMART system will then provide detailed reports on the customer, with all order analytics and changes in inventory levels.
- Different workflows and systems can be tailored into the system, so please apply for these on application.

# Customoziation and Integration

SMART systems can be tailored to your specific needs with user-defined rules and triggers. Seamless integration with ERP, CRM, and other business systems ensures smooth data synchronization

# Case Study

One of our onboarded clients came to us with a brief of what they wanted their system to do, which included inventory tracking, an online sales platform with a customized front-end design, and custom customer login details that can only be assigned by the Admin, with certain customers only seeing certain products.

We successfully completed this project and met all the client's requirements. They have now increased the sales of these products by over 45%, while increasing efficiency, allowing the business to grow and sell more unique products
